Karma Woeser

Portland, OR | karmawoeser1@gmail.com | linkedin.com/in/karma-woeser | github.com/kwoeser | kwoeser.netlify.app

Technical Skills

Languages: Python (4 years), JavaScript (3 years), C (3 years), Java (1 year)

Frameworks & Libraries: React, Flask, Express, Pandas, NumPy, Scikit-learn, Tailwind CSS Tools & Technologies: Git, Linux, Docker, Jupyter, Node.js, MongoDB, PostgreSQL, AWS

EXPERIENCE

Cognizant

June 2024 – August 2024

Generative AI Intern Remote

- $\bullet \ \ {\rm Assisted} \ \ {\bf in} \ \ {\bf the} \ \ {\bf fine-tuning} \ \ {\bf of} \ \ {\bf models} \ \ {\bf using} \ \ {\bf PyTorch} \ \ {\bf and} \ \ {\bf evaluated} \ \ {\bf performance} \ \ {\bf to} \ \ {\bf inform} \ \ {\bf further} \ \ {\bf optimization}.$
- Documented model behavior, results, and tradeoffs to support ongoing development and experimentation.

UO Solar Radiation Monitoring Lab

Sept 2022 – June 2023

Data Analyst Intern

Eugene, OR

- Refactored 800+ lines of legacy Perl into Python, improving code readability and reducing complexity.
- Automated data processing using Python and NumPy, increasing processing speed by ∼15%.
- Retrieved and validated solar radiation data from monitoring stations across Oregon.

EDUCATION

University of Oregon

Eugene, OR

BS in Computer Science, Minor in Math

Expected Graduation Date: June 2025

Coursework/Clubs: Leet Club, Data Structures and Algorithms II, Machine Learning, System and Security Administration, Software Engineering

Projects

Fake News & Political Bias Detector | Python, Scikit-learn, FastAPI, React, TypeScript

- Built a full-stack web app to detect misinformation and political bias in news articles, using a text classification model that achieved a **98% F1-score** on 45,000+ samples.
- Developed a FastAPI backend to serve model predictions and handle article URL processing.
- Built a responsive **React and TypeScript** frontend for submitting URLs and displaying results.

Article Curation Platform | TypeScript, React, Node.js, PostqreSQL, Tailwind CSS, Docker, AWS

- Has been used by 50+ students to save and manage their favorite articles.
- Built a React frontend with optimized API requests using **React Query** for caching and background updates.
- Deployed on AWS EC2 using Docker Compose with a self-managed PostgreSQL instance.

GitRead - README Generator | Python, Flask, React, Google Gemini API, GitHub OAuth

- Used by 100+ students on campus, making documentation easier for developers.
- Developed an automated tool that generates detailed README templates from GitHub repositories.
- Integrated secure GitHub authentication via Flask-Dance for a smooth login experience.

House Prices Predictor | Python, Flask, Pandas, scikit-learn, Matplotlib

- Built a machine learning pipeline to predict house prices using a dataset of 1,460 homes and 79 features.
- Created a Flask API to integrate the trained machine learning model.
- Optimized Random Forest and Gradient Boosting models using GridSearchCV, reducing RMSE by 10%.

EasyA - Grading Analysis App | Python, Flask, JavaScript, MongoDB, Docker

- Built backend **APIs** to process and filter grading distributions.
- Integrated Chart. is to create interactive, real-time grade trend visualizations.
- Designed a MongoDB schema for efficient storage and querying of historical grading data.

AI Chatbot | React, Express, Clerk API, Google Gemini API

- Developing a full-stack AI chatbot application using **React** for the frontend and **Express** for the backend, integrating **Google Gemini AI** for NLP.
- Implemented Clerk for user authentication and management, enabling secure user sign-ups and logins.
